

## Chinook CH-47D Anniversary finish

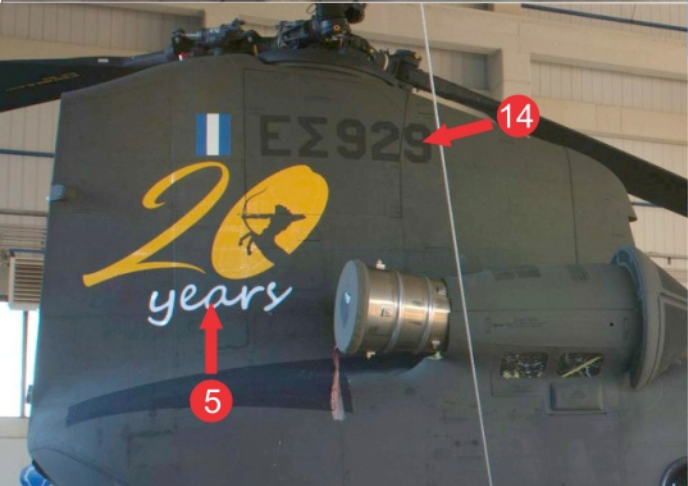

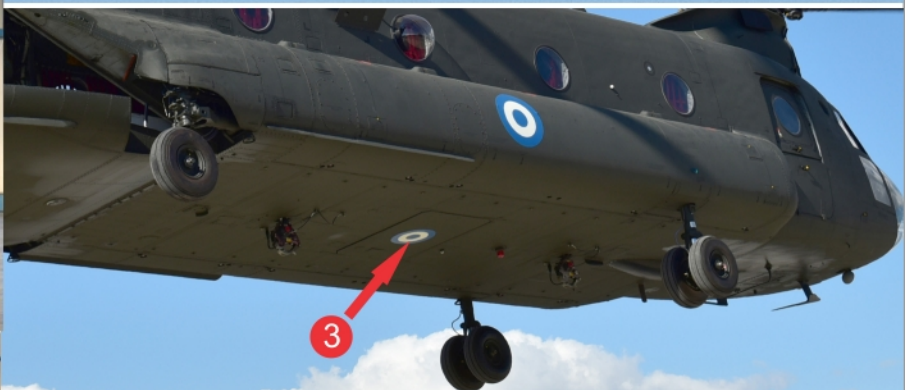

To mark its 20th anniversary the Hellenic Army's 4th Army Aviation Helicopter Battalion applied a special finish to a CH-47D. The finish was designed in cooperation with AviationProject.com. and Dimitiris Sambanis both of whom have been responsible for several other special finishes applied to various aircraft. Greek scripts was applied on the port side of the fuselage and English script on the starboard side. The helicopter retained all its normal markings, i.e., national insignia, serial numbers and stencilled instructions.

The finish was applied using a combination of painted markings and vinyl stickers. As both have a rather glossy finish the modeller should not attempt to hide the decal's sheen. The Helicopters original markings, i.e. national insignia, serial number and stencilled instructions have a matt finish.

**Special thanks:** This set of markings has been produced with the full cooperation of **AviationProject.com**, who designed the markings for the actual aircraft and Dimitris Sambanis who also provided the photos for this leaflet.

**LMX 0075**

**NOTE**

The markings below have been printed on a digital Sol-Ink printer by DecalPrint.de. The modeller should treat these with extra care and cut as close as possible to the design because the carrier film extends over the complete decal paper.

**NOTE:** The layout of the decal sheet varies from scale to scale. Your decal sheet might not be identical to the one depicted here as every effort is made to save space in the layout and reduce the final cost for you the customer.

This instruction sheet may be downloaded and printed for your personal use.
